IN THE CLAIMS

Please amend Claims 1, 33 and 38 as follows:

1. (Amended) A safety shield apparatus comprising:

a needle having a distal portion and a proximal portion; and

a shield including at least one elongated part, the shield having a proximal end mounted with the proximal portion of the needle and a distal end mounted with a planar contact surface, the planar contact surface including a needle linear bearing that slidably facilitates movement of the needle relative to the shield, the shield being extensible between a retracted position and an extended position via fixed positioning of the planar contact surface relative to movement of the shield.
